AI / SYSTEMS / PRODUCTION

AI that fits the way your systems work.

Practical opportunities across the Statement of Health experience, its underlying systems, and the teams operating them.

> Technology should adapt to the business. Not the other way around.

Consulting, implementation, and adoption — from identifying opportunities to operational solutions in production.

METLIFE / STATEMENT OF HEALTH

From opportunity to working system.

We kick off with existing processes, systems, data, and constraints — no predefined AI solution.

01

Discover

Find friction, measurable value, available data, and constraints.

02

Design

Define the experience, architecture, integrations, and controls.

03

Build

Implement workflows, business rules, permissions, and human review.

04

Transfer

Launch, document, enable teams, and support continuous improvement.

One experience. Several points of leverage.

The ideas below are hypotheses to explore together, not necessarily a 1:1 reflection of MetLife's current environment.

01

CUSTOMER EXPERIENCE & ENGAGEMENT

Help applicants complete the journey.

AI-guided assistance, progress recovery, and duplicate handling.

02

CONTINUOUS EXPERIENCE OPTIMIZATION

Make experience improvements repeatable.

AI-assisted testing, experiments, and synthetic journey evaluation.

03

OPERATIONAL EFFICIENCY

Give teams faster and leaner operational context.

AI-powered internal assistance, issue triage,

Customer Experience & Engagement

FRICTION IN THE JOURNEY

An applicant is unsure how to proceed and may abandon the SOH form.

A MORE CONTINUOUS EXPERIENCE

A context-aware AI form copilot guides each step, highlights missing information, and helps applicants resume.

PROPOSED OPPORTUNITY

AI Form Copilot · Intelligent Drop-off Recovery

— Form copilot — Resume later — Targeted follow-ups — Duplicate submission detection

MEASURES TO VALIDATE

Completion rate · abandonment by step · resumed applications

Continuous Experience Optimization

REACTIVE EFFORT

Manual testing and scattered research can make changes costly to evaluate.

CONTINUOUS LEARNING

AI-assisted A/B testing, synthetic-user evaluation, automated journey and regression tests.

PROPOSED OPPORTUNITY

AI-Assisted A/B Testing · Automated UI Testing & QA

— Regression scenarios — A/B testing — Synthetic user journeys — UX research hub

MEASURES TO VALIDATE

Regression detection · testing time · successful form completion

Operational Efficiency

FRAGMENTED CONTEXT

Information and operations across SOH systems can be hard to access and investigate.

CONNECTED ASSISTANCE

An internal SOH AI assistant provides conversational access to approved tools and documentation, with automated issue triage.

PROPOSED OPPORTUNITY

Internal SOH AI Assistant / MCP · Automated Issue Triage

– API monitoring – Documentation discovery – Approved tool access – Human oversight

MEASURES TO VALIDATE

Time to investigate · issue resolution effort · repeated errors

Data & Insights

DISCONNECTED SIGNALS

SOH metrics and feedback may be spread across tools, making patterns hard to identify.

A SHARED OPERATIONAL VIEW

A shared SOH dashboard, AI-generated insights, and natural-language questions reveal journey bottlenecks.

PROPOSED OPPORTUNITY

SOH Analytics Dashboard · AI-Generated Insights

— Completion funnels — Segment comparisons — Pattern detection — Ask questions in natural language

QUESTIONS TO EXPLORE

Where do applicants get stuck? What correlates with successful completion?

08 / OUR TEAM

Experience across product decisions and production systems.

Daniel Lerner

CONSULTING · INFRASTRUCTURE · DATA

20+ years across IT consulting, systems, cloud, integration, optimization, and technical support.

Martin Rosbier

SOFTWARE · ARCHITECTURE · INTEGRATIONS

Software engineering and architecture, APIs, cloud platforms, integrations, and automation.

Nico Santos

PRODUCT · ROADMAP · PRIORITIZATION

Technical product management connecting user needs, business priorities, roadmaps, and implementation.

09 / SELECTED WORK

AI built into operational workflows — with control where it matters.

01 / IDENTITY & SECURITY

Internal AI platform with controlled execution

Connected knowledge, workflows, and AI tools, with human approval before actions are executed.

MCP · DESKTOP APP · HUMAN APPROVAL

02 / INFRASTRUCTURE

Infrastructure copilot

Assistance with Terraform configuration, error investigation, and proposed fixes under human supervision.

TERRAFORM · ERROR ANALYSIS · TROUBLESHOOTING

03 / E-COMMERCE

AI within an operations dashboard

Connected orders, sales, production, and fulfillment workflows to support daily operational decisions.

APIS · WOOCOMMERCE · OPERATIONS

Enterprise integration is part of the roadmap, not an afterthought.

BANKING & INSURANCE

Banking and insurance workflows built around existing APIs and production systems.

Reverse engineering of integrations, authentication, data mappings, API contracts, error handling, and workflow automation.

ADDITIONAL EXPERIENCE

Analytics, planning, and integrated content workflows.

A track record across enterprise integrations and data-driven platforms, alongside AI-focused implementations.

WHY THIS MATTERS FOR SOH

Any valuable AI feature must work with existing services, data access rules, ownership boundaries, and operational constraints.

Implementing tools is not enough.

We also help define how they are used, with which data, under which rules, and who can make decisions.

NEXT STEP / WORKSHOP

Opportunity workshop

Identify and prioritize your high-impact pilot.

WORKSHOP OUTPUT

One prioritized opportunity, initial scope, risks, and next steps to define your pilot.
